Andrea Miller
iFly LLC
13265 North US 183, Suite A,
Austin, TX 78750

Dear Ms. Miller:

As an experienced project manager and engineer I'm excited to be applying for the great opportunity at iFly. Skydiving has always been my passion and the ability to work on the team as a Project Manager in Wind Tunnel Commissioning would allow me to combine my background and training with my hobbies in a rewarding career.

Most recently I have been managing, directing, and improving the work of product development teams to successfully deliver 20+ hardware and software projects on time and on budget. That work has included teams of 25+ on 3 continents from multiple internal and external departments and companies. Critically that work has included balancing competing deadlines, resources, and objectives while understanding and communicating shared goals. In the words of my last performance review "Chris has good working relationships throughout the company and is able to use his influence to achieve project goals. He is eager to learn, is detail oriented, and does a good job of removing obstacles"

Beyond my positive reviews, here are a few of the ways that I match the skills outlined in the posting:

- 5+ years experience leading and managing project teams including obtaining my Project Management Professional (PMP) certification.
- 10+ years of experience working in and around industrial control systems, installing and commissioning new equipment, maintaining existing processes, and troubleshooting issues as they arose.
- 5+ years of experience working with Ladder Logic, specifically in Allen Bradley PLCs, variable frequency drives (VFDs), and large control systems.
- Proficiency in Spanish with practical experience living and working in Spanish speaking environments

My combination of experiences in project management, engineering, and industrial control systems would allow me to make an immediate positive impact at iFly. Thanks for the consideration, I have attached a resume for your review, and I look forward to speaking with you soon.

Best Regards,

Chris Kaschner
